

ABSTRACT

A baked toastable freezer stable filled waffle is disclosed. The filled waffle has a batter-based outer casing material that surrounds an inner filling material. Utilization of a filling material having a water content and water activity level below that of the outer casing material enables the formation of a toastable freezer stable filled waffle. The filled waffle can be stored frozen and reheated rapidly in a conventional toaster without burning or charring of the outer casing material and complete heating of the inner filling material.
